Greetings all:

EPA provided comments to several work plans required by the Administrative Order on Consent (AOC) on February 10, 2011. Please find attached the revised work plans and reports that are due today, February 25<sup>th</sup>. Our responses are included within the revised documents as requested. Additionally, EPA requested a proposed due date for the submission of the report documenting completion of the Cell E6 liner evaluation and repair. We have provided the parties with CQA reports documenting repairs to both the northeast and southwestern portions of this cell. As noted within our daily progress report of February 24, 2011, evaluation and repair to the liner within the northwestern section of Cell E6 will be delayed pending removal of the soil/rock over burden produced by the storm water diversion system construction. WMH proposes to provide this CQA report by May 15, 2011. Please let me know if you have any questions.

Best regards,

*Joe Whelan*
